# SIRIO HH INDUSTRIAL

Sirio HH industrial is targeted for users who need to mix paints in pails from 15 to 30 liters. Sirio HH industrial is available in 2 versions, with two or four mixing positions, both available with IP54 or ATEX rules. The specific mixing lids are available separately, adaptable to the most commonly used pails (between 291 and 293 mm internal diameter) and suitable for both water-born products and for solvent-based products.

## Modularity

Both the structures with 2 or 4 positions are expandable with Sirio HH modules, to have only one mixing machine suitable for the full line of paints. It is also possible to add to the right side a second mixing structure with 2 positions without motor to increase the number of pails to be mixed.

## Technical features

### Timer

The cyclic timer is equipped with an emergency button and two buttons for start and stop. It is supplied with a standard setting by 20 min. ON / 240 min. OFF and there are alternative settings available.

### Pouring mode

At the end of the working plan, there is a tipper structure that, hooking the sliding plate, allows to pour the paint without lifting the pail itself.

### Ergonomics

Sirio HH Industrial is supplied with can plates, sliding on the front table easily, to avoid to the operator to move the heavy pails.
